

Todo List React App

Overview

The **TodoList App** is a React-based task manager that lets users add, edit, delete, and mark tasks as completed. It's built for simplicity and clarity, using **Bootstrap** and **custom CSS** for styling.

Technologies Used

Technology	Purpose
React.js	Component-based UI framework
Bootstrap	Responsive design and layout
CSS3	Custom styling
JavaScript (ES6)	Logic and interactivity

Folder Structure

plaintext

Features

- **Add Tasks:** Type a task and press Enter or click "+".
- **Edit Tasks:** Click the pencil icon to modify a task.
- **Complete Tasks:** Click the check icon to move tasks to completed.
- **Delete Tasks:** Remove tasks from active or completed lists.
- **Responsive UI:** Styled with Bootstrap and custom CSS.

Component Breakdown

Todoinput.js

Handles user input and triggers the parent's `addlist()` function when pressing Enter or clicking the add button.

App.js

Manages all states:

- `listtodo` → Active tasks
- `ctask` → Completed tasks
- `editindex`, `edittext` → Editing functionality

Includes logic for adding, editing, deleting, and completing tasks.

App.css

Defines layout and visual styling — containers, buttons, icons, and task rows.

Installation & Setup

```
npx create-react-app todolist
```

```
cd todolist
```

```
npm install bootstrap
```

```
npm start
```

Import Bootstrap in `src/index.js`:

```
javascript
```

```
import 'bootstrap/dist/css/bootstrap.min.css';
```

Run the App

```
npm start
```
